

Pipeline Ancillaries

Strainers and Filters SF 2.00I

sieve basket strainer for large diameters

Technical Data

Connection DN	50 - 1000
Nominal Pressure PN	16 - 40
Temperature	50 °C (optional 450 °C)
Medium	liquids, gases and steam

Description

Strainers protect plant and equipment such as regulators, valves, measuring equipment against damage or operational failure caused by contamination. They are essential for start-up as well as continuous operation.

SF 2.00I is a welded construction made of steel, optionally of stainless steel or special materials such as Duplex, Hastelloy® or Monel. The basket strainer is equipped with a ventilation sleeve in the cover and with a drain plug in the bottom of the body. Owing to the basket posed perpendicularly to the direction of flow and the straight throughflow, pressure loss in the dirt collecting chamber is relatively small. For larger nominal diameters, the installation of a strainer with the cover pointing upwards is recommended. Various versions, materials and accessories are available (see options).

Cleaning is extremely simple and quick. Only the cover has to be removed for dismantelling.

Standard

- » body of welded steel
- » basket of stainless steel
- » ventilation sleeve in the cover
- » drain plug in the bottom of the body
- » primed and varnished as per RAL 5010 blue

Options

- » completely made of stainless steel (pickled and passivated)
- » strainer mesh sizes 0.1 - 10 mm
- » differential pressure display
- » quick-lock mechanism
- » supporting feet
- » cover lifting and pivoting device
- » special materials such as Duplex, Hastelloy® or Monel
- » various seal materials suitable for your medium
- » special connections: ANSI or JIS flanges, welding spigots; other connections on request
- » special versions on request

Operating instructions, know how and safety instructions must be observed. All the pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

Sieve Inlet

nominal diameter DN	mesh size	filter area [cm²]	open screen area	volume
50	0.5 mm	225	22%	2.2 l
65	0.5 mm	350	22 %	4 l
80	0.5 mm	500	22 %	6 l
100	0.5 mm	825	22 %	14 l
125	0.5 mm	1262	22 %	16 l
150	0.5 mm	1916	22 %	26 l
200	1 mm	2970	23 %	60 l
250	1 mm	4704	23 %	90 l
300	1 mm	6834	23 %	165 l
350	1 mm	8156	23 %	265 l
400	1 mm	10775	23 %	410 l
500	1 mm	17013	23 %	780 l

Calculation of flow resistance

$$\Delta p = \zeta \cdot w^2 / 2 \cdot \rho \cdot 10^{-5} \text{ [bar]}$$

ζ = Coefficient of flow resistance

w [m/s] = Flow velocity

ρ [kg/m³]: Density of medium

Exact calculation considering the operating conditions by request.
