Pressure control valves

Pressure reducing valves DM 555

Universal Valve for Small and Medium Flow Rates

Technical Data

Connection DN 15 - 50 Connection G 1/2 - 2 Nominal pressure PN 40 40 bar Inlet pressure Outlet pressure 0.5 - 20 bar K_{vs} value 1.3 - 7.5 m³/h Temperature -40 up to 200 °C Medium liquids, gases and steam

Description

Self-acting pressure reducers are simple control valves offering accurate control while being easy to install and maintain. They control the pressure downstream of the valve without requiring pneumatic or electrical control elements.

The DM 555 pressure reducing valve is a spring-loaded proportional control valve for universal application at small and medium flow rates. The valve body and medium-wetted internal parts are made of stainless steel 316L featuring excellent corrosion resistance. The valve cone is fitted either with a metallic or a soft seal.

The outlet pressure to be controlled is balanced across the control unit by the force of the valve spring (set pressure). As the outlet pressure rises above the pressure set using the adjusting screw, the valve cone moves towards the seat and the volume of medium is reduced. As the outlet pressure drops, the valve control orifice increases; when the pipeline is depressurised, the valve is open. Rotating the adjusting screw clockwise increases the outlet pressure.

These valves are no shut-off elements ensuring a tight closing of the valve. In accordance with DIN EN 60534-4 and/or ANSI FCI 70-2 they may feature a leakage rate in closed position in compliance with the leakage classes III or V, optional IV.

Standard

- » Body and medium-wetted internal parts made of stainless steel 316L
- » DIN or ANSI flanges, threaded sockets G or NPT
- Non-rising adjusting screw
- » Quick-release fastener for the body

Options

- » Various seal materials suitable for your medium
- » Special connections: aseptic, JIS flanges or welding ends; other connections on request
- » Special versions on request

Operating instructions, know how and safety instructions must be observed. The pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.
