

# High-pressure needle valve

## Nominal pressure of 15,000 ... 60,000 psi

### Model HPNV

WIKA data sheet AC 09.27

#### Applications

- Oil and gas, chemical industry, machine building and automation
- For injection systems, test benches, hydraulic power packs, blow-out protection
- Blasting/cutting with water, high-pressure cleaning

#### Special features

- Low-wear design due to non-rotating spindle tip in the bonnet
- Low torque and smooth operation of valve handle even at high pressure
- Leak-tested tightness in accordance with BS6755 / ISO 5208 leakage rate A
- Large selection of materials and configurations available
- Customer-specific combination of valves and measuring instruments (instrument hook-up) on request

#### Description

The model HPNV high-pressure needle valves have been developed for high-pressure applications of 15,000 ... 60,000 psi [1,034 ... 4,136 bar]. The valve is particularly suitable for control panels, where the space is restricted, or for test benches.

The non-rotating valve spindle prevents seizing and scoring, even if the valve is rarely opened or only partially closed.

With the blow-out proof design of the valve, working safety is ensured, especially in applications with high pressure loading and frequent pressure cycles.

The valve can be fully opened/closed with only 5 turns.

**Fig. left: 2-way valve, straight bore**  
**Fig. right: 2-way valve, angled bore**

The risk of unintentional loosening of the bonnet is minimised by a mechanical stop for the handle. Quick assembly and disassembly of the handle is possible thanks to the self-centring system. The valve design and high-quality sealing materials ensure long operating times and high tightness.

On request, WIKA offers the professional assembly of valves and pressure measuring instruments and also other accessories into a ready-to-install solution, also known as an instrument hook-up. To ensure the performance of the complete system, an additional leak test is carried out on the instrument hook-up.

## Version

Example: 2-way valve, straight bore, cone/threaded screw connection

## Versions

2-way valve, straight bore

2-way valve, angled bore

3-way valve, two pressure connections

3-way valve, one pressure connection

2-way valve, straight bore, male thread/female thread

## Particular features

Bonnet for low-temperature applications

With mounted actuator

T-bar handle from stainless steel 316L

## Pressure-temperature diagram

Nominal pressure	Max. permissible operating pressure in bar at temperature in °C	Max. permissible operating pressure in psi at temperature in °F
<b>15,000 psi [1,034 bar]</b>	1,034 bar at 38 °C	15,000 psi at 100 °F
<b>20,000 psi [1,379 bar]</b>	1,379 bar at 38 °C	20,000 psi at 100 °F
<b>30,000 psi [2,068 bar]</b>	2,068 bar at 38 °C	30,000 psi at 100 °F
<b>60,000 psi [4,136 bar]</b>	4,136 bar at 38 °C	60,000 psi at 100 °F

For permanently low operating temperatures of  $\leq -55\text{ °C}$  [ $\leq -67\text{ °F}$ ] a special design is required.

## Manufacturer's information and certificates

Logo	Description
-	<b>PMI <sup>1)</sup> test certificate (option)</b> All wetted parts

1) Positive material identification

## Certificates

- 3.1 inspection certificate per EN 10204 (option)
  - Material certificate for all wetted parts per NACE MR0103/MR0175
  - Confirmation of pressure tests per API 598 <sup>2)</sup>

2) Shell test: 15 s test duration with 1.5 times the permissible working air pressure
